

CLEARSTONE – Product Care

The following instructions are important for the care of all **CLEARSTONE** Surfaces.:

- The coating needs to be treated with care as sharp {knives} and abrasive [pot scour] type of items will cause scratching of the surface. A cutting board is recommended.
- It is not recommended that you take hot pots straight of a hotplate or out of an oven and place them directly onto the Clearstone surface. The Clearstone has fire/heat resistant chemical added and will withstand considerable amount of heat but we recommend you use a heat resistant pad or board on top of the surface. If it does become damaged it can be repaired by our applicators.
- Only mild detergents and water should be used for washing and cleaning the surfaces. Or any standard kitchen surface cleaner that you would use on a laminated surface. i.e. Non abrasive mild cleaners such as –
 - * Glass Cleaner, i.e. “Windex”.
 - * Furniture Cleaner/polish, i.e. “Mr Sheen”.
- For high Gloss Finish use a soft cloth and ‘Clearstone polish’ available from your local applicator or Innovative Composites. Note; Light scratches or scuffs marks can be removed by your self by sanding the surface with very fine sand paper prior to polishing but we recommend our Applicators as below.
- Under no circumstances should metal or razor scrapers be used for cleaning the surface.
- While the Clearstone surface is very chemical resistant, [can be cleaned with Acetone] aggressive chemicals or sealants should not be allowed to contact the coating, without first checking their compatibility with the surface. Either by contacting Innovative Composites or testing a small area to confirm that the Chemical is not likely to have any adverse effects to the appearance and/or the clarity of the finish.
- Should the coated surface become scratched and/or “tired looking” it may be re-finished by an approved Applicator at a charge to be negotiated.

NOTE: Contact Innovative composites Pty. Ltd. on (03) 9738 7095 for further Information if in any doubt as to the above information.
